GENERAL INDEX
OF
VOLUMES XLII-L OF THE THIRD SERIES.

In the references to volumes xli to l, only the numerals i to ix are given.

NOTE.—The names of minerals are inserted under the head of "MINERALS": all obituary notices are referred to under "OBITUARY." Under the heads "BOTANY," "CHEMISTRY," "GEOLOGY," "ROCKS," the references to the topics in these departments are grouped together; in many cases, the same references appear also elsewhere.

A
Abbe, C., atmospheric radiation of heat, iii, 384; Mechanics of the Earth's Atmosphere, v, 442.
Aberration, Rayleigh, iii, 432.
Absorption by alum, Hutchins, iii, 526.
Absorption spectra, Julius, v, 254.
Academy of Sciences, French, ix, 328.
Academy, National, meeting at Albany, vi, 488; Baltimore, iv, 504; New Haven, viii, 513; New York, ii, 523; Washington, i, 521, iii, 441, v, 527, vii, 484, ix, 428.
on electrical measurements, ix, 286, 316.
Texas, Transactions, v, 78.
Acoustics, researches in, Mayer, vii, 1.
Acton, E. H., Practical physiology of plants, ix, 77.
Adams, F. D., melilite rock from Canada, iii, 260; Ueber das Norian oder Ober-Laurentian von Canada, vi, 153; nepheline-syenite in Ontario, viii, 10; the Laurentian of Canada, i, 58.
Aerodynamics, experiments in, Langley, ii, 427; vii, 41.
Agassiz, A., observations in the West Indies, v, 78, 358; notes from the Bermudas, vii, 411; on the Florida Reef, ix, 164; Bahamas and the Reefs of Cuba, ix, 425; underground temperatures at great depths, 1, 508; Age of the earth, King, v, 1; Fisher, v, 464.
Agricultural analysis, Wiley, i, 431.
Air, diselectrification, Kelvin, ix, 470; liquefaction of, by Perkins, Davidson, ix, 235.
Alabama, geological survey, see Geol. Reports and Surveys.
Industrial and Scientific Society, i, 257.
Alaska, expedition to, Russell, ii, 171.
Albinopean studies, Uhler, iv, 333.
Alps, section of, Rothpletz, vii, 482.
Alternating currents, Bedell and Crehan, vii, 435; resonance analysis, Pupin, viii, 379, 473.
Altitudes in the United States, dictionary of, Gannett, iv, 262.
Alum crystals, anomalies in the growth, Miers, vii, 350.
Aluminum, wave length of ultra-violet lines of, Range, i, 71.
American Association of Chemists, i, 337.
Geological Society, see Geol. Society of America.
Philosophical Society, v, 527, see Association.
Ami, H. M., geology of Quebec, iii, 75.
Ampere's laws, apparatus, Raps, vii, 479.
Andes, appendix to travels amongst, Whymper, iii, 436.
Angot, A., les aurores polaires, 1, 509.
Antarctica, physical geography of, Fricker, vi, 317.
Appalachian gold fields, Becker, i, 425.
Are light for libraries, Dobson, vii, 76.
Argon, see Chemistry.
Arkansas coal measures, Smith, vii, 482.
Agricultural survey, see Geol. Reports and Surveys.
Arms, J. H., Insecta, i, 296.
Arnold, C. H., increasing the frequency of electrical oscillations, vi, 359.
Arnold, H., Die Negativ-retouche, etc., iv, 256.
Articulates, derivation and homologies of, Dana, vii, 325.
Asphaltum from Trinidad, ix, 2.
Atmosphere, new gaseous constituent, vi, 257.
Atmospheric radiation, Hutchins, iii, 256.
Atkinson, vi, 256.
Aurores borealis, Trowbridge, vii, 140.
Audubon monument, vii, 256.
Australia, barrier reef of, Saville-Kent, v, 257.
Ayres, E. F., plattnerite, iii, 257.

B
Bahama Expedition of the State Univ. of Iowa, Nutting, ix, 257.
Bahamas and the Reefs of Cuba, Agassiz, ix, 257.
Bailey, E. H. S., halotrichite from Pitkin Co., Colorado, i, 257; Tonganoxie meteorite, ii, 257.
Baker, E. P., eruption of Kilauea, i, 257; ii, 77.
Ballard, H. O., fossil shells in the drumlins of the Boston Basin, viii, 257.
Baltimore, geol. map, Williams, v, 257.
Barker, G. F., Elementary Chemistry, iv, 257.
Barbour, v, 257.
Barlow, A. E., relations of the Laurentian and Huronian of Lake Huron, iv, 257.
Barometer, mercurial, Waggener, ii, 257.
Barrett, W. F., Practical Physics, v, 257.
Barrett, W. L., on daimonelix, ix, 257.
Barlow, A. E., relations of the Laurentian and Huronian of Lake Huron, iv, 257.
Barlow, A. E., relations of the Laurentian and Huronian of Lake Huron, iv, 257.
Bartow, G. H., channels on drumlins, vi, 257.
Barrows, C., compressibility of hot water and solvent action on glass, i, 257.
Beard, v, 257.
Bere, v, 257.
Bere, v, 257.
Bead, v, 257.
Bead, v, 257.
Beal, v, 257.
Baker, E. P., eruption of Kilauea, i, 257.
Baker, E. P., eruption of Kilauea, i, 257.
Baker, E. P., eruption of Kilauea, i, 257.
Baker, E. P., eruption of Kilauea, i, 257.
Baker, E. P., eruption of Kilauea, i, 257.

secular variation of terrestrial magnetism. i, 109, 189, 314.
Bayley, W. S., fulgurite from Maine, iii, 327; fibrous intergrowth of augite and plagioclase, iii, 515.

stratified garnet from Buckfield, Me., iv, 79; chlorite-syenite of Me. and N. H., iv, 590.

Summary of Progress in Mineralogy and Petrography in 1892, vi, 76; actinolite-magnetite schists from N. Minnesota, vi, 176.
Beach, F. E., cupric nitrate in the voltameter, use of, vi, 81.
Beaches of L. Erie, Leverett, iii, 281; iv, 1.

Becker, G. F., “potential” a Bernoullian term, v, 97; Fisher’s new hypothesis, vi, 137; Green’s use of “potential” vi, 151; finite elastic stress-strain function, vi, 337; astronomical conditions favorable to glaciation, vii, 95.
Bedell, F., effects of self-induction and distributed static capacity in a conductor, iv, 389; work on alternating currents, noticed, v, 435.
Beecher, C. E., development of the Brachiopoda, i, 348.

development of Bilobites, ii, 51.

Upper Silurian strata near Penobscot Bay, Me., iii, 412.

development of the Brachiopoda, Pt. II, iv, 133; lower Ordovician fauna in Columbia Co., N. Y., iv, 410.

larval forms of Trilobites from the lower Helderberg, vi, 142; larval form of Triarthrus, vi, 378; thoracic legs of Triarthrus, vi, 407; appendages of Triarthrus, vii, 298.
structure of Trinucleus, ix, 307.
Behrens, H., Microchemical Analysis, ix, 74.
Bergen, J. Y., Jr., Text-book of Physics, v, 255.
Bermudas, notes from, Agassiz, vii, 411.
Berzelius and Liebig, Letters from 1831-1845, v, 433.
Bibliography by the International Congress of Geologists, iii, 71.

Bibliotheca Polytechnica, i, 482.

Zoologica, Taschenberg, ii, 438; iv, 503; vii, 199.
Bigelow, F. H., terrestrial magnetism, i, 78; solution of aurora problem, i, 83; reply to Nipher on the theory of solar corona, i, 505; solar corona, ii, 1; causes of variations of the magnetic needle, ii, 253; inversions of temperatures in solar magnetic period, viii, 435; the earth a magnetic shell, i, 81.

Biological lectures, Wood’s Holl, vii, 406.

Bionomie des Meeres, Waithet, vi, 240.

Bird, C., Elementary Geology, i, 249.

Birds, North American, Nehring, vii, 139; ix, 484.

Bishop, S. E., Kilauea in April, 1892, iv, 207.

Bismuth, resistance in strong magnetic fields, Henderson, viii, 427.

Bitumens, origin, Peckham, viii, 389; work on, Jaccard, i, 509.
Blair. Chemical analysis of iron, ii, 428.

Blake, W. P., columbite of Black Hills, South Dakota, i, 408; lead and zinc regions of Wisconsin, vi, 306.

Blanford, W. T., fauna of British India, Mammalia, Pt. II, iii, 388.

Blowpipe Analysis, Landauer, iv, 80.

Endlich, v, 76.

Bloxam, C. L., Chemistry, noticed, i, 68.

Bolometer, surface, Kurlbaum, iii, 239.

Bolton, H. C., Bibliography of Chemistry, vi, 301.

Boltwood, B. B., double salts of cesium chloride, etc., i, 249.

Boltzmann, Maxwell’s Theory of Electricity and Light, iii, 536; vii, 194.

Bonaparte, R., Excursion in Corsica, i, 509.

Bonney, T. G., story of our planet, viii, 430.

Bonnier, G., cultures, experimentales dans les Alpes et les Pyrenees, i, 255.

Boston Society of Nat. History, prizes given by, iii, 541.

Botanical Garden of Missouri, i, 336; v, 526; i, 507.

botanical works—French Academy, v, 355.
society, Italian, iii, 437.

Botanical Works—Australische Florenelement in Europa, Ettingshausen, i, 332.
BOTANICAL WORKS—
Botanik, Lehrbuch der, Frank, ix, 75; Giesenhagen, ix, 75; Pax, ix, 75; Strasburger and Schimper, ix, 75.
Botany, Gray’s, Bailey, ix, 325.
Practical, Bower, ix, 78.
Text-book, Vines, ix, 481.
Cellulose, Cross, Bevan and Beadle, ix, 482.
Die natürlichen Pflanzen-familien, Nos. 68, 69, Engler and Prantl, iii, 162: Engelmann, vi, 76; Engler, i, 78.
Elms of Massachusetts, Dame, i, 254.
European plants, index, Richter, i, 165.
Flora of Mt. Desert, Rand and Redfield, vii, 431.
Practical, Willis, ix, 77.
Flowers of Field and Garden, Matthews, i, 78.
India, vegetable resources, Watts, vii, 511.
Kewensis, Index, i, 508.
Lichens found in Britain, Crombie, vii, 77.
Mycetozoa, Lester, ix, 245.
Nursery-Book, Bailey, i, 442.
Oaks, West American, Greene, i, 383.
Pflanzen-Teratologie, Pensig, ix, 75.
Plants of Orizaba, Seaton, vi, 76.
Practical Physiology, Darwin and Acton, ix, 77.
Silva of North America, Sargent, i, 73.
Sowerby’s models of British Fungi in the British Museum, vii, 78.
Synoptical flora of North America, vol. i, 1, 429.

BOTANY—
Aeration of solid tissues, Devaux, iv, 502.
Anatomy of plants, comparative, Chatin, iii, 161.
Annual plants, vitality, Holm, ii, 304.
Atmosphere, constitution, Phipson, vii, 431.
Australian narcotics, ix, 483.
Balken in den Holzelementen der Coniferen, i, 254.
Bennettites Gibsonianus, fructification, Solms-Laubsch, iii, 387.
Berberis, movements of the stamens, Chauveaud, ix, 165.
Blanced seedlings, how they may be saved, Cornu, v, 356.
Botanic gardens in the equatorial belt and South seas, Goodale, ii, 173, 260, 347, 434, 517.
Botany, economic possibilities of, Goodale, ii, 271.
Chalazogamy, Nawaschin, 1, 429.
Chlorophyll in leaves, Etard, iii, 498.
Corticium Oakesii and Michenera Areocrea, notes on, Peirce, i, 163.
Cultures experimentales dans les Alpes et les Pyrénnées, Bonnier, i, 355.
Dissemination, interesting method, Daun, ix, 483.
Endogones from Exogones, origin of, Henslow, vi, 77.
Fructification von Bennettites Gibsonianus, Solms-Laubsch, i, 381.
Galápagos flora, Robinson and Greenman, 1, 135.
Genus Lamourouxia, Robinson and Greenman, 1, 169.
Germination of seeds, effect of poison on, Cornevin, iii, 161.
Grafting, Daniel, viii, 512.
Hypertrophie des lenticelles chez la pomme de terre, Devaux, i, 442.
Inflorescence in descriptive, Hy, vii, 513.
Intracellular crystallization, artificial, Belzun, iv, 501.
Isoetes lacustris, Farmer, i, 384.
Laminariaeae, muciferous system, Guignard, iv, 501.
Leaf-removal from grape vines, effect, Munz, iii, 487.
Mexican plants, Robinson and Greenman, 1, 150.
Multiple buds, researches, Russell, iv, 501.
Muscelae, respiration, Jönsson, viii, 431.
Nitrification of soil, Dehénin, vi, 158.
Nutationskrümmungen, etc., Hansgirg, i, 385.
Ovule and embryo-sac in Vincetoxicum, Chauveaud, iii, 498.
Perfumes of flowers, localization of Meenard, v, 355.
Plants, action of Pyocyanic bacillus on, Charrin, vi, 158.
Prodrumus Faunas Mediterraneae, Carus, iv, 326.
Protoplasmverbindungen in der Pflanze, Kientz-Gerloff, i, 518.
bei Algen, Kohl, i, 520.
Rainfall and leaf-form, Stahl, vi, 77.
Botany—

Recherches anatomiques sur les hy-
brids, Brandza, i, 74.

Root-grafting, Daniel, iii, 162.

Species common to Europe and
America, Blanchard, iii, 161.

Sphenophyllum, l'appariel fructifica-
teur, de, Zeiller, vii, 239.

Terebinthacee, Jadin, viii, 513.

Tribus der Gaertneri, Solereder. i, 384.

Turgescence and transpiration in
fleshy plants, Aubert, vi, 77.

Umbelliferae, assimilation in, de
Lamarlière, iii, 160.

Vegetation, influence of moisture
on, Gain, v, 356.

Water, absorption by roots, Le-
comte, ix, 167.

See also under Geology.

Bower, F. O., Practical Botany, ix, 78.

Brackett, R. N., newtonite and re-
cortorite, ii, 11.

Brandza, M., recherches anatomiques
sur les hybrides, i, 74.

Braner, J. C., geol. survey of
Arkansas, i, 435; ii, 347; v, 73.

Brazil, nepheline rocks in, Derby, v,
74.

Brewer, W. H., notice of Daniel
Cady Eaton, l, 184.

Brigham, A. F., drift bowlders in
central New York, ix, 213.

Brigham, W. T., recent eruption of
Kilanea, i, 507.

British Geology, Annals, 1891. Blake,
v, 525.

Museum, catalogues of, Lydekker,
i, 330.

Broadhead, G. C., Cambrian and the
Ozark series. vi, 57.

Brügger, W. C., Eruptivgesteine des
Kristianiagebietes, i, 348.

Brown, W., Practical Physics, v, 524.

Browning, F. E., separation of ba-
rain from calcium, iii, 314; of
strontium from calcium, iii, 50, 638.

separation of barium from.
strontium, iv, 459; separation of
strontium from calcium, iv, 462.

determination of iodine in haloid
salts by arsenic acid, v, 384; in-
fluence of free nitric acid and
water regia on the precipitation of
barium as sulphate, v, 390.

separation of copper from cad-
mium, vi, 280.

Brückner's Klimaschwankungen, i,
141.

Burton, W. K., the great earthquake
of Japan, 1891, iv, 80.

Byerly, Fourier's series and spheric-
ral etc. Harmonics, vii, 160.

C

Cajori, E., History of Mathematics,
vii, 321.

Calcium lines, new, Eder and Valenta,
ix, 150.

California, State mineralogist's report,
1890, Ireland, i, 440.

barium, vii, 250.

Cretaceous, so-called Wallala beds
as a division of, Fairbanks, v, 473.

gold ores, Turner, ix, 374, 478;
mineralogical report, ix, 242.

Call, R. E., serpent from Iowa, i, 297;
silicified woods of eastern Arkansas,
i, 394; distribution of North Amer-
ican Viviparidae, viii, 132; Life of
Rafinesque, ix, 247.

Calvin, S., Iowa geol. survey, vol. i,
1892, vi, 397.

Cambridge Natural History, vol. iii,
molluscs, l, 79.

Campbell, G. F., double chlorides,
bromides and iodides of cesium and
zine, vi, 431; cesium-cobalt and
cesium-nickel, etc., viii, 418.

Campbell, M. R., Tertiary changes in
the drainage of Virginia, viii, 21.

Canada, geol. survey, iii, 77; ix, 248;
1, 347.

Candle flames, law, Glen, vii, 400.

Caoutchouc, structure, Luaders, vi,
135.

Cape Cod, sea encroachment at, Marin-
din, ii, 172.

Carbon of the electric oven, spectrum,
Deslandres, l, 501.

Carhart, H. S., a one volt standard
cell, vi, 60; Physics for University
students, ix, 238.

Carnegie, D., law and theory in
Chemistry, viii, 357.

Carus, J. V., Prodromus Fauna Medi-
terraneae, etc., i, 73; vi, 320.

Cary, A., geological facts on Grand
river, Labrador, ii, 419, 516.

Caustics, demonstration, Wood, l, 301.

Cayenx, L., pre-Cambrian organisms,
ix, 323; l, 267.

Celestial Handbook, Poole, v, 528.

Chalmers, R., glacial lake St Law-
rence of Upham, ix, 273.

Chamberlin, T. G., relationship of
 Pleistocene to Pre-pleistocene of
Mississippi Basin, i, 359; diversity
of the glacial period, v, 171; drain-
age features of Upper Ohio basin,
vii, 247; correction, 483.

Chemical Works—

Chemical Analysis, Crookes, viii,
425; of Inorganic Substances, ix,
316.
GENERAL INDEX.

CHEMISTRY

Ammonium-lead halides, Wells and Johnston, vi, 25.

Antimony blue, Sebor, vii, 428.

determination, Gooch and Grue-
ner, ii, 213; and arsenic sepa-
rated, Gooch and Danner, ii, 308;
and bismuth alloys, thermo-
electric heights, Hutchins, viii,
236; and rubidium, double hal-
des, Wheeler, vi, 269.

Arabinose produced from wheat
bran, Steiger and Schulze, i, 437.

Argon, Rayleigh and Ramsay, ix, 275.
combined with benzene vapor,
Berthelot, ix, 422.
correction to paper on, Hill, 1,
70.

fluorescence, Berthelot, 1, 264.
lines in the spectrum of atmos-
phere, Newall, ix, 424.
physical properties, Rayleigh, 1,
264.

Prout’s hypothesis, Hill, ix, 405.
spark spectrum, Hartley, ix,
435.
specific refraction, 1, 416.
and helium, Hill, i, 539; Bou-
chard, i, 501.
in meteoric iron, Ramsay, i, 264.
refractivity and viscosity, Ray-
leigh, i, 418.
in uraninite, Ramsay and Crookes, ix, 421.

Arsenic acid. Gooch and Phelps,
vii, 216.

with antimony and tin, Gooch
and Hodge, vii, 382.

with cesium and rubidium,
double halides, Wheeler, vi, 88.
in copper, estimation of minute
quantities, Gooch and Moseley,
vii, 392.
distinguished from antimony,
Deniges, i, 427.
tests for, Clark, vi, 297.

Azoimide or Hydrazoic acid, Curt-
tius, i, 154.
inorganic synthesis, Wislicenus,
iv, 421.

Barium, determination in presence
of calcium and magnesium, Mar,
iii, 521; estimation of, Mar, i, 288.
precipitation influenced by nitric
acid and aqua regia, Browning,
v, 309.

separation from strontium by
amyl alcohol, Browning, iv, 459;
separation from calcium, Browning,
iii, 314.
sulphate in analysis, Phinney,
v, 468.
### CHEMISTRY

**Battery, secondary, chemistry of,** Cantor, ii, 160.

**Bismuth, atomic mass, Schneider,** ix, 313.

**Black sulphur of Magnus, Knapp,** ii, 432.

**Boiling-point apparatus for determining molecular masses, Sakurai,** v, 346.

**Borneo and isoborneol, crystal forms,** Hobbs, ix, 449.

**Boron, amorphous,** Moissan, iv, 497; i, 499.

**atomic mass, Abrahall,** iv, 498.

**tri-iodide,** Moissan, ii, 256.

**trisulphide and pentasulphide of,** Moissan, v, 430.

**Bromvalerianic-acid,** Spenzer, ix, 113.

**Cesium and cadmium, double chlorides, bromides and iodides,** Wells and Walden, vi, 425.

**etc., double halides, with thallium, etc.,** Pratt, ix, 397.

**chloride, double salts of, etc.,** Wells and Boltwood, i, 249.

**properties, Beketoff,** iii, 431.

**quantitative determination,** Wells, vi, 186.

**rubidium, etc., double chlorides and bromides,** Walden, vii, 288.

**trihalides,** Wells and Penfield, i, 17.

**and zinc, double chlorides, bromides and iodides,** Wells and Campbell, vi, 431.

**Cesium-cobalt and cesium-nickel halides, etc.,** Campbell, vii, 410.

**Cesium-cupric bromides,** Wells and Walden, vii, 94.

**Cesium-lead and potassium-lead halides,** Wells, v, 121.

**Cesium-mercuric halides,** Wells, iv, 221; crystallography of, Penfield, iv, 311.

**Caffeine and theine, identity of,** Dunstan and Shepheard, v, 522.

**Calcium, barium and strontium, carbides,** Moissan, viii, 506.

**Capillary phenomena and molecular mass, Goldstein,** i, 64.

**Carbazide and di-urea,** Curtius and Heldenreich, ix, 151.

**Carbon, allotropism of amorphous,** Luzi, iv, 497.

**baron and silicon in electric furnace,** Moissan, vii, 476.

### CHEMISTRY

**Carbon compounds, chemistry of,** von Richter, ii, 509; dispersion, Barbier and Roux, i, 324.

**in meteoric iron,** Moissan, i, 499.

**new forms, Luzi,** iv, 251.

**sulphide,** von Lengyell, viii, 235.

**oxidation of different forms,** Wiesener, vi, 431.

**preparation under high pressure,** Moissan, vi, 477.

**produced from cyanogen,** P. and L. Schützenberger, i, 241.

**Carbon boride,** Moissan, viii, 305.

**chlorides, production, V. Meyer,** ix, 312.

**di-iodide,** Moissan, vii, 253.

**di-oxide determination,** Gooch and Phelps, i, 101; electricity produced in preparation of, Hanssknecht, i, 513; industrial production of liquid, Troost, iv, 421.

**monoxide, action of heat on Berthelot,** ii, 67; new reaction, ii, 170; density, Leduc, vi, 206.

**Carbonyl compounds, constants of refraction, Nasini and Anderlini,** ix, 58.

**sulphide,** Nuriscsán, iii, 431.

**Carborundum, Mühlauser,** vii, 477.

**Charcoal, deportment with the halogens, etc.,** Mixter, v, 363.

**Chemical change, influence of moisture,** Baker, viii, 422.

**phenomena at low temperatures,** Pictet, v, 157, 432.

**reactions, dead space in, Liebreich,** i, 239, ii, 170; in jelly, speed of, Reformatsky, i, 485; relation of refractive index to, Fény, vi, 68.

**and electrical energy in voltaic cells,** Levay, ii, 66.

**Chloracetic acid, thermochemistry,** Tanatá, vii, 76.

**Chlorates, estimation,** Gooch and Smith, ii, 220.

**and nitrates, estimation of,** Roberts, vi, 231.

**Chloride of mercury batteries,** Fitch, viii, 434.

**Chlorides, cesium-cupric,** Wells and Dupee, vii, 91; Wells, vii, 96.

**Chlorine expansion, Richardson,** iii, 430.

**generation of,** Gooch and Kreider, viii, 166.

**preparation, by nitric acid and manganese dioxide,** Lunge and Pret, vi, 68.
CHEMISTRY—

Chlorine. properties of liquid, Knetsch, i, 153.
Chloroform, effect of low temperatures, Pictet, ix, 150.
Chromium, manganese and uranium in the electric furnace, Moissan and Viole, vii, 73; prepared by means of magnesium, Glätzel, i, 153; separation from iron and aluminum, Riggs, viii, 409.
Coal dust explosions, Thorpe, iv, 250.
Gas flames, luminoity, Lewes, iv, 70.
Compounds containing lead and extra iodine, Wells, i, 21.
Compressibility of hydrogen, oxygen, nitrogen, Amagat, i, 512.
Copper, chemical equivalent, Beach, vi, 81.
Cupric chloride solutions, relations of to heat, Reicher and Van Deventer, i, 66.
Cyanogen, structure of the flame, Smithells and Dent, vii, 421.
Dextrine and gum arabic, molecular masses, Linebarger, iii, 426.
Diammonium, Curtius, ix, 56.
Diamond, production artificially, Moissan, viii, 68.
Di-ethyl hydrazine, Harries, ix, 151.
Dihydroxytartaric acid as a reagent for sodium, ix, 313.
Electrolysis of alkali salts, Arrhenius, vii, 72; of a liquid, indirect, Andreoli, i, 344; by alternating currents, Hopkinson, Wilson, and Lydall, vii, 66; of steam, Thomson, vii, 315.
Electrolytic gas, temperature of ignition, Freyer and V. Meyer, v, 156.
Elements, genesis of, Crookes, i, 429.
Endothermic decompositions obtained by pressure, Lea, vi, 413; reaction of, with chlorine and oxygen, Harker, v, 349; effect on electrical properties of palladium, Brucchielli, vii, 396.
Hydrazine, inorganic preparation, Duden, ix, 311.
Hydrate, Curtius and Schulz, ii, 257.
Hydrazoic acid, Curtius and Radenhausen, i, 437.
Hydrogen, occlusion by lead, Newman and Streintz, iii, 533; physical constants, Olzowski, ix, 409; reaction of, with chlorine and oxygen, Harker, v, 349; effect on electrical properties of palladium, Brucchielli, vii, 396.
and oxygen, relative densities, Rayleigh, iv, 418.
peroxide, anhydrous, Wolfenstein, ix, 229; in the atmosphere, Boch, viii, 67.
Ethane and propane, Hainlen, ix, 149.
Ethyl ether, preparation of, Krafft, vii, 479.

CHEMISTRY—

Ferrons iron in silicates, Pratt, viii, 149.
Fluorine, free, produced by chemical means, Brauner, viii, 439.
physical properties, Moissan, iii, 149, 429.
Fluosulphonic acid, Thorpe and Kirman, v, 232.
Freezing points of very dilute solutions, Raoult, v, 67.
Fusing points, high, V. Meyer, Riddle and Lamb, ix, 288.
Gases, separation by electric discharge, Baly, vi, 286.
Gaseous hydrocarbons, heats of combustion, Berthelot and Matignon, vii, 74.
Gravi-volumeter, Japp, iii, 149.
Halogen, determination in mixed silver salts, Gooch and Fairbanks, i, 27.
Heat, influence on chemical reactions, Lemoine, vii, 283.
of combustion of nitrogenous animal products, Berthelot and André, i, 66.
of fusion and solubility, Walker, i, 65.
re-conversion of, into chemical energy, Naumann, v, 155.
Helium, Ramsay, Collie and Travers, i, 259.
compound nature of, from cleiite, Runge and Paschen, i, 413.
line, wave length of the D, Palmer, i, 357.
spectrum, Crookes, i, 305.
Hydrate of sodium trioxide, Tafel, ix, 148.
Hydrogen, occlusion by lead, Newman and Streintz, iii, 533; physical constants, Olzowski, ix, 409; reaction of, with chlorine and oxygen, Harker, v, 349; effect on electrical properties of palladium, Brucchielli, vii, 396.
and oxygen, relative densities, Rayleigh, iv, 418.
peroxide, anhydrous, Wolfenstein, ix, 229; in the atmosphere, Boch, viii, 67; in the electrolysis of sulphuric acid, Kuriloff, vi, 70;
CHEMISTRY—
color, etc., of, Spring, i, 343; and ozone, constitution, Traube, vi, 474.
phosphide, Retgers, ix, 148.
Hydrosulphides, metallic, Linder and Ploton, iii, 362.
Hydroxylamine, constitution, Koltoff, vi, 71; free, de Bruyn, iii, 151, iv, 253, v, 430; Brauhl, vii, 235.
Hyponitrous acid, Thum, vii, 317.
Indigo-carmine, synthesis of, Heyn, viii, 233.
Iron carbonyl, indices of, Ostwald, v, 296; determinations of by means of solid solutions, Van't Hoff, i, 152; new principle of determining, Nernst, i, 239; titration method for determining, Küster, viii, 65.
Iodic acid, action of reducing agents on, Roberts, vii, 422; viii, 151.
Iodine, base-forming function of, Meyer and Hartmann, vii, 399; new bases, Meyer and Hartmann, viii, 503, in haloid salts determined by arsenic acid, Gooch and Browning, v, 334.
in its solutions, chemical condition, Gautier and Charpy, i, 241.
Ions, color of, Ostwald, v, 347; Lea, ix, 357; electromotive activity of, Nernst and Panli, v, 156.
Iron carbonyl, Mond and Langer, iii, 151; in water gas, Roscoe and Scudder, iii, 132.
manganese and calcium, separation, Riggs, iii, 135.
and nickel-tetracarbonyl, Mond and Quincke, ii, 424.
Isomorphism, Retgers, iii, 68.
Lactic acid resolved into optically active constituents, Purdie and Walker, v, 66.
Levalacetic ferment on dextrose, rhamnose and mannitol, Tate, vii, 75.
Lead tetracetate, Hutchinson and Pollard, vii, 75; tetrachloride, double salts, Wells, vi, 180.
Lummer-Brodhun prism in colorimetry, Krliss, viii, 66.
Magnesium chloride separated from the chlorides of sodium and potassium, Riggs, iv, 103.
Manoerymeter, De Visser, vii, 130.
Manganese, new element, Richmond and Off, v, 66.
Mercuric sulphide, change of black to red, Spring, i, 342.
Mercurous chloride, size of the molecule, V. Meyer and Harris, viii, 506.

CHEMISTRY—
Mercury, detection in cases of poisoning, Lecco, ii, 68.
Metallic carboxyls, Mond, iv, 422.
Metals, fluidity below their melting points, Spring, ix, 467; and oxides in the electric arc, fusion and volatilization, Moissan, viii, 131.
Molecular formula of hydrogen fluoride, i, 514; formulas of liquids, Ramsay, vii, 396.
mass determined from rate of evaporation, Kronberg, vi, 296; determinations of by means of solid solutions, Van't Hoff, i, 152; new principle of determining, Nernst, i, 239; titration method for determining, Küster, viii, 65.
Molybdenum and tungsten, new oxygen compounds, Fehard, iii, 70.
Motochemistry, Molinari, vii, 238.
Nickel and cobalt, atomic masses, Winkler, ix, 312.
Nitrates, iodometric determination of, Gooch and Gruener, iv, 117; Gruener, vi, 43.
Nitric acid, reduction by ferrous salts, Roberts, vi, 126.
Nitro-copper, Sabatier and Sondereg, vi, 394.
Nitrogen, anomaly in the density, Rayleigh, viii, 504; see Argon.
explosive haloid compounds, Seliwanow, viii, 67.
group, new element, Bayer, ix, 290.
preparation and properties of pure, Threlfall, vi, 476.
and air, refractive indices of liquid, Liveing and Dewar, vi, 478.
monoxide, Smith, vii, 475; Villard, ix, 57; boiling and freezing points, Ramsay and Shields, vi, 297.
peroxide, dissociation, Ostwald, iii, 430.
trioxide, Lunge and Porschnew, ix, 56.
Nitro-metals, Sabatier and Sandersons, vii, 478.
Osmotic experiment, Nernst, i, 152.
pressure, Planck, i, 131; Boltzmann, i, 512; measurement of, Tammann, iv, 71.
Oxidation of nitrogen by the spark, Lepel, iv, 421.
Oxygen from calcium plumbate, Kassner, vii, 398.
extration from air, Kassner, i, 514.
CHEMISTRY-

Oxygen, hydrogen and nitrogen, densities, Rayleigh, vii, 234.

in illuminating gas, vi, 478.

for lime light, Hepworth, v, 158.

line spectrum, Elsig, vii, 479.

liquid, optical properties, vi, 69, 393.

two-fold spectra, Baly, ix, 468.

and air, liquefied, properties, Dewar, iv, 419.

Ozone, formation at high temperatures, Brunck, vi, 475;

from oxygen, Shenstone and Priest, vi, 394;

produced by rapid combustion, Ilosvay, ii, 338;

temperature of steam, Brunck, vi, 475;

from boiling, Sakurai, iv, 496.

Sarcolactic acid produced by the fermentation of inactive lactic acid, Hlosvay, ii, 389;

production, acid, Frankland and MacGregor, iii, 150.

Pentahalides, alkali-metal, iv, 42.

Perchlorates, Kreider, i, 287.

Perchloric acid, preparation, etc., Kreider, ix, 443.

Persulphates, crystallized, Marshall, iii, 69.

Petroleum in its relations to asphaltic pavements, Peckham, vii, 28.

Phenanthrene as a solvent in cryoscopic determinations, Garrelli and Ferratini, vii, 232.

Phenol, coefficient of molecular depression, Juillard and Curchod, iv, 72.

Phosphoric acid, basicity, Berthelot, iii, 532.

oxide, preparation of pure, Shenstone and Beck, vi, 70.

Phosphorus, conversion of yellow to red, Retgers, vii, 475;

preparation by the action of aluminum upon the phosphates, Rossel and Frank, vii, 68.

Platinochlorides and platinum subchlorides, Lea, viii, 397.

Platinum, polarization by oxygen and hydrogen, Markofsky, iii, 531.

Potassium determined spectroscopically, Gooch and Hart, ii, 448.

permanganate in iron analysis, Roberts, vii, 290;

and sulphuric acid, interaction, Gooch and Danner, iv, 301.

and lead, peculiar halides, Wells, vi, 190.

and sodium carbonyls, Joannis, vii, 318.

Precipitated membranes, permeability, Tammann, v, 252.

Precipitates, separation of, at the surface-bounding electrolytes, Kümmler, v, 157.

Selenic acid, reduction by hydrochloric acid, Gooch and Evans, i, 400.

reduction by potassium bromide in acid solution, Gooch and Scoville, i, 402.

Selenious acid determined by potassium permanganate, Gooch and Clemons, i, 51.

Selenium, reduction of the acids of, by hydriodic acid, Gooch and Reynolds, i, 254.

Silica, volatilization of, Cramer, vi, 290.

Silver, allotropic, Lea, i, 179, 259, ii, 312; Prange, i, 325.

chlorides, Lea, iv, 444, 446.

haloid molecule, disruption of, Lea, iii, 527.

hemisulphate, Lea, iv, 322.

hyponitrite produced from hydroxylamine, Wislicenus, vii, 72.

metallic solutions, Lea, viii, 343.

notes on, Lea, iv, 444.

oxide, estimation and dehydration of, Lea, iv, 246.

solutions of metallic, Lea, vii, 343.

and alkali-metals, double halides of, Wells and Wheeler, iv, 155.

Sodium, preservation, Rosenfeld, ii, 70.

Sodium-amine, etc., Joannis, i, 515.

Solubility, law of, applied to solutions of salts, Linebarger, ix, 48.

Solution and pseudo-solution, Linder and Picton, ix, 467.

Solutions, nature of certain, and new means of investigating them, Lea, v, 478.

Chemistry-

Quicklime, inertness, Veley, vi, 300.

Quinine, Beyer, iv, 252.

Rotatory power of liquids, effect of temperature on, Agnan, vi, 392.

Rubidium determined by the spectroscope, Gooch and Phinney, iv, 392.

lead halides, etc., Wells, vi, 34.

and potassium trihalides, Wells and Wheeler, iii, 475.

Salt-solutions, rise of, in filter papers, Fischer and Schmidtmber, v, 431;

temperature of steam from boiling, Sakurai, iv, 496.

Sarcocyclic acid produced by the fermentation of inactive lactic acid, Frankland and MacGregor, vii, 74.

Selenium acid, reduction by hydrochloric acid, Gooch and Evans, i, 400.

reduction by potassium bromide in acid solution, Gooch and Scoville, i, 402.

Selenious acid determined by potassium permanganate, Gooch and Clemons, i, 51.

Selenium, reduction of the acids of, by hydroiodic acid, Gooch and Reynolds, i, 254.

Silica, volatilization of, Cramer, vi, 290.

Silver, allotropic, Lea, i, 179, 259, ii, 312; Prange, i, 325.

chlorides, Lea, iv, 444, 446.

haloid molecule, disruption of, Lea, iii, 527.

hemisulphate, Lea, iv, 322.

hyponitrite produced from hydroxylamine, Wislicenus, vii, 72.

metallic solutions, Lea, viii, 343.

notes on, Lea, iv, 444.

oxide, estimation and dehydration of, Lea, iv, 246.

solutions of metallic, Lea, vii, 343.

and alkali-metals, double halides of, Wells and Wheeler, iv, 155.

Sodium, preservation, Rosenfeld, ii, 70.

Sodium-amine, etc., Joannis, i, 515.

Solubility, law of, applied to solutions of salts, Linebarger, ix, 48.

Solution and pseudo-solution, Lin-
CHEMISTRY—
Spectrum given by nickel-carbonyl, Living and Dewar, vi, 393.

Phosphates of America. Wyatt, Petroleum, viii, 75.

Permian coal plants, Zeiller.

Paleozoic corallines, Whitfield, ix, 323.

crustacea, bibliography, 1698–1859, Vogdes, i, 486.

fossil localities of Pa., N. J., and Vermont, Poirste, vi, 435.

species of Lindley and Hutton’s Fossil Flora, Kidston, iii, 344.

Permian coal plants, Zeiller, vi, 75.

of Texas, Sturr, iii, 9.

Petroleum, asphaltum and bitumen, Jaccard, i, 509.

natural gas, etc., of west Kentucky, Tann, iv, 78.

Phosphate fields of Florida, Darton, i, 102; Johnson, v, 497.

Phosphates of America, Wyatt, iii, 79.

influence of swamp waters on formation, Reese, iii, 402.

Pithecanthropus erectus, Marsh, ix, 144.

fluvial planes of Pennsylvania, Leverett, ii, 200.

fossils, Whithrop, Mass., Dodge, vii, 100.

history of N. E. Iowa, McGee, v, 71.

and pre-Pleistocene of Mississippi basin, Chamberlin and Salisbury, i, 359.

Portage of New York, Prosser, vi, 212.

Post-Eocene formations of Alabama, Smith, vii, 283.

history of the Hudson River Valley, Merrill, i, 460.

origin, faults of, Matthew, ix, 322.

submergence, central Michigan and the, Mudge, i, 443.

subsidence of the middle Atlantic coast, Lindenkohl, i, 498.

Post-Laramie deposits of Colorado, Cross, iv, 13.

Pre-Cambrian organisms, Cayeux, i, 267.

Pre-Olenellus fauna, Noetling, viii, 509.

Geology—

Protolenus fauna, Matthew, i, 265.

Quaternary carnivores of the Island of Malta, v, 74; deposits of Russia, Nikitin on the, A. A. Wright, v, 350.

era and deposits of flooded rivers, Upham, i, 33.

Quebec City, geology. Ami, iii, 75.

Radiolarians, pre-Cambrian, Cayeux, ix, 322.

Raised reefs of Fernando de Noronha, Ridley, i, 406.

Redrock sandstone of Iowa, Keyes, i, 273.

Reptilian remains from the Triassic of No. California, Merriam, i, 55.

Resin, fossil, Smith, viii, 73.

Rock-fracture at Appleton, Wis., Cramer, i, 482; Reade, i, 489.

Rocky Mt. range in British America, elevation, since the close of the Cretaceous, Dawson, ix, 493; region in Canada, Dawson, ii, 239.

Saganaga syenite, Winchell, i, 386; Selwyn, iii, 319.

Sandstone, columnar, Milne Curran, i, 435.

Secular cooling, and earth straining, Davidson, vii, 480.

Seismic periods, Davison, vii, 155.

Sharon coal of N. E. Ohio, quartz boulder in, Orton, iv, 62.

Shasta-Chico series, Diller, vii, 141.

Shasta region of California, metamorphic series, Smith, i, 346.

Shawangunk Mtn., Darton, vii, 482.

Shear-zone in the Adirondacks, Kemp, iv, 109.

Silicic beds in the Eocene of New Zealand, Hinde and Holmes, iv, 259.

sinter formed by vegetation of hot springs, Weed, i, 138.

Silurian limestone in No. Michigan, Sesman, vii, 178.

sandstone of Keweenaw Pt., Wadsworth, ii, 170.

Lower, fish remains in, Walcott, i, 245; Lamellibranchiata, new, Ulrich, iv, 79; limestone, Tennessee, Shaler, ix, 160.

Silurian, upper strata near Penobscot Bay, Me., Dodge and Beecher, iii, 412.

Soils, origin and nature, Shaler, v, 163.

Sphenophyllum, Newberry, ii, 76.

Steep Rock Lake, Ont., geology, Smyth, ii, 317.

Stegosaurus, restoration of, Marsh, ii, 170.
Geology—
St. John group, fauna of, Matthew, ii, 73; viii, 72.
St. Peter's sandstone, Sarde son, iii, 539.
Submergence of Europe, Prestwich, vii, 146.
Syenite, Sagnagana, Winchell, i, 386; Selwyn, iii, 319.
Syllogue fungorum fossili um, Meschinelh, iv, 335.
Tenuipteris fern and its allies, new, White, v, 490.
Terraces in glaciated regions, origin, Berry, vii, 539.
Tertiary—
Epoch, unity of, Wright, iv, 351.
Triassic of No. California, reptilian remains, Merriam, i, 55.
Connecticut, Davis and Griswold, vii, 196.
Dinosauria, Marsh, iii, 543.
Fossiliferous black shale of Connecticut, Davis and Loper, ii, 72.
Trap rocks of Connecticut, Davis and Loper, ii, 72; of New Haven region, Dana, ii, 79, iv, 165; Percival's map of, and on the mountain-making, Dana, ii, 439.
Triceratops, restoration of, Marsh, i, 339.
Trilobites, appendages of, Walcott, vii, 481; from the lower Helderberg, larval forms, Beecher, vi, 142; of Upper Carboniferous, Kansas, i, 517.
Unio-like shell from the Coal measures, Whitesaves, vii, 146.
Upper Hamilton of New York, Prosser, vi, 212.
Urnatella gracilis, Davenport, vi, 73.
Variation, geological aspects, Gosselet, ix, 473.
Vertebrate fossils as a criterion of age, Marsh, ii, 265, 336.
Volcanic action in the British Isles, history, Kelkie, ii, 178; iv, 76.
rocks, see Rocks.
Volcano, see Kilauea.
Wallula beds, so-called, as a division of the California Cretaceous, Fairbanks, v, 473.
Water of a salt lake on Oahu, anal., ii, 522.
West Indian region, change of level, Stimpson, ix, 321.
Whetstones and novaculites of Arkansas, Griswold, iv, 332.
White limestones, Orange Co., N.Y., age, Kemp and Hollick, vii, 401.
Worms (Lobworms), work of, C. Davison, iii, 162.
Georgia, geol. survey, see Geol. Reports and Surveys.
Geyser, experiments with an artificial, Graham, v, 54.
Gilbert, G. K., Lake Bonneville, i, 327; formation of lake basins by wind, ix, 159.
Glacial drift, diversity, Upham, vii, 358.
epoch, unity of, Wright, iv, 351.
Glacial erosion of New York, Lincoln, vii, 105.

Genesee Lakes, Fairchild, i, 345.

Geology of Great Britain, Lewis, viii, 73.

Lake Agassiz in Manitoba, Upham, ii, 429; Lake St. Lawrence of Upham, Chalmers, ix, 273; lakes in Western New York, Fairchild, ix, 156.

landforms of the margins of the Alps, Mill, ix, 131.

limit in East, Pennsylvania, Williams, ix, 174.

period, continuity of, Wright, vii, 161; diversity of, Chamberlin, v, 171; unity of, Upham, v, 70; epochs of, Upham, ix, 385.

in Iowa, McGee, v, 71; in Russia, Nikitin, v, 456; in New England and Upper Miss., Dana, vi, 327.

phenomena of Newfoundland, etc., Wright, ix, 86, 156; west of Hudson Bay, Tyrrell, ix, 322.

pot-holes in California, Turner, iv, 453.

records in the Newark system questioned, Russell, i, 459.

rock-crushing, iii, 539.

scratches in Pennsylvania, Foshay and Hice, ii, 172.

succession in Europe, Geike on, ix, 62; Hughes, ix, 164.

See also drift, Quaternary, etc., under Geology.

Glaciologist's Magazine, vi, 310.

Glaciation of Asia, Kropotkin, vi, 400.

epeirogenic movements associated with, Upham, vi, 114; astronomical conditions favorable to, Becker, vii, 93; effect on the present fauna of N. A., Scudder, vii, 170; in the Finger-Lake region, N. Y., Lincoln, iv, 290.

Glacier Bay, Alaska, Reid, vi, 365; clays and till near Boston, Crosby, ii, 259.

Glaciers, excavations by, v, 74.

of Mt. St. Elias, Russell, iii, 169; periodic variations in, Forel, iv, 342.

Glass, silvering, Lumière, ix, 470; solubility of, Kohlrausch, iii, 155.

Glazebrook, R. T., Practical Physics, v, 436; Dynamics, ix, 484.
