I. Summary of the thermodynamic/electrostatic properties of the solvent

Abstract	I-1089
Introduction	I-1089
Review of previous work	I-1090
Conventions, units, and notation	I-1093
Volume	I-1098
Compressibility and thermal expansion	I-1105
Dielectric constant	I-1126
Born functions	I-1148
Entropy	I-1148
Helmholtz and Gibbs free energies	I-1159
Activity and fugacity	I-1162
Internal energy and enthalpy	I-1167
Heat capacity	I-1173
Summary of the properties of $\text{H}_2\text{O}_{\text{liquid}}$ at saturation	I-1180
Concluding remarks	I-1181
Acknowledgments	I-1182
Appendix	I-1188
References	I-1194

* The first identity in eq (124) on page 1297 of Part IV and eq (58) in Helgeson, H. C., 1982, "Prediction of the thermodynamic properties of electrolytes at high pressures and temperatures", in Rickard, D. and Wickman, F. E., eds., *Chemistry and Geochemistry of Solutions at High Temperatures and Pressures*: Oxford, Pergamon Press, p. 133-177, are in error. The term

$$2 \sum_j \tau_{e,j} / \hat{j}$$

in these equations should be replaced by

$$2 \sum_k \sum_j \nu_{j,k} r_{e,j} / \sum_k \nu_k$$

In addition, Ag^+ , Cu^+ , and Au^+ should be deleted from line 1 and inserted after Fe^{++} in line 2 of the footnote to table 18 on page 1435 of Part IV. Other corrections are given and/or cited in footnote 1 of Part III, footnote 1 of Part IV and the note added in proof on page 1482 of Part IV. See also Errata beginning on page E-1443 of the present volume.

II. Debye-Huckel Parameters for Activity Coefficients and Relative Partial Molal Properties

Abstract	II-1199
Introduction	II-1199
Units, conventions, and uncertainties	II-1200
Activity coefficient	II-1204
Enthalpy	II-1208
Heat capacity at constant pressure	II-1219
Internal energy	II-1225
Heat capacity at constant volume	II-1234
Volume	II-1238
Compressibility	II-1243
Expansibility	II-1250
Summary of parameters for saturated liquid H ₂ O	II-1258
Concluding remarks	II-1258
Acknowledgments	II-1259
References	II-1259

III. Equation of state for aqueous species at infinite dilution

Abstract	III-97
Notation	III-97
Review of theoretical concepts	III-105
Partial molal volume at infinite dilution	III-105
Ionization as a function of pressure	III-107
Derivation of the equation of state	III-118
Electrostatic model of ion solvation	III-119
Intrinsic volume and electrostriction collapse	III-125
Partial molal volume, expansibility, and compressibility	III-125
Analysis of density data	III-126
Calculations and uncertainties	III-128
Discussion	III-133
Regression of standard partial molal volumes and compressibilities	III-142
Ionic radii and the Born coefficient (ω)	III-148
Entropy considerations	III-154
Intrinsic volume and electrostriction collapse	III-159
Discussion	III-165
Standard partial molal expansibility	III-168
Standard partial molal compressibility	III-172
Summary of equation of state coefficients	III-181
Comparison of high pressure/temperature data with predictions from the equation of state	III-183
V°_{NaCl} as a function of pressure at 25°C	III-184
Conductance data at high pressures and temperatures	III-186
Standard partial molal volumes, expansibilities, and compressibilities of electrolytes at high pressure temperatures	III-188
Contribution of solvent collapse and ion solvation	III-192

Conventional standard partial molal volumes, compressibilities, and expansibilities of ionic species	III-197
Correlations and coefficient estimates	III-214
Entropy, volume, and compressibility	III-214
Equation of state coefficients	III-219
Concluding remarks	III-230
Acknowledgments	III-228
References	III-231

IV. Calculation of activity coefficients, osmotic coefficients, and apparent molal and standard and relative partial molal properties to 600°C and 5 kb

Abstract	IV-1249
Introduction	IV-1250
Conventions, units, and notation	IV-1251
Glossary of symbols	IV-1254
Resume of previous work	IV-1267
Review of thermodynamic relations	IV-1275
Partial molal properties of aqueous species	IV-1276
Activity/concentration relations	IV-1280
Relative partial molal properties	IV-1283
Apparent molal properties and the partial molal properties of the solvent	IV-1284
Theoretical concepts	IV-1288
Relative partial molal Gibbs free energy	IV-1290
Long-range ionic interaction	IV-1293
Ion-solvent interaction	IV-1298
Short-range ionic interaction	IV-1317
Combined equations	IV-1318
Activity coefficients	IV-1321
Effects of ion association on ρ^*_{γ}	IV-1335
Correlation and calculation of b_{γ} and b_{ii}	IV-1344
Mixed electrolytes	IV-1346
Osmotic coefficients	IV-1355
Relative partial molal and apparent molal enthalpy, heat capacity, volume, compressibility, and expansibility	IV-1357
Evaluation of extended term parameters	IV-1364
Enthalpy	IV-1365
Heat capacity	IV-1374
Volume and compressibility	IV-1379
Corresponding states relations	IV-1406
Discussion	IV-1407
Prediction of thermodynamic properties at high pressures and temperatures	IV-1408
Standard partial molal properties	IV-1408
Equation of state	IV-1409
Calorimetric consequences of electrostriction collapse and ion solvation	IV-1410

Standard partial molal entropy, enthalpy, and Gibbs free energy	IV-1412
Regression calculations	IV-1413
Correlation and estimation algorithms	IV-1431
High pressure/temperature predictions	IV-1437
Extended term parameters for single electrolytes	IV-1443
Regression calculations	IV-1451
Correlation and estimation of compressibility pa- rameters	IV-1459
Discussion	IV-1459
Activity and osmotic coefficients	IV-1468
Geochemical approximations	IV-1471
Concluding remarks	IV-1481
Acknowledgments	IV-1482
Appendix A—Summary of identities among partial molal properties of components and aqueous species	IV-1483
Appendix B—Summary of relations among relative partial molal properties of components and aqueous species	IV-1485
Appendix C—Debye-Hückel parameters	IV-1489
Solvation parameters	IV-1491
Short-range interaction parameters	IV-1491
Extended term parameters for “completely” dis- sociated single electrolytes	IV-1492
References	IV-1493
Errata	E-1443
Subject index	SI-1
